

Structured Clinical Endoscopy Report

Patient Name:	Sarah Jenkins	Patient ID:	PT-3841
Age / Gender:	45 / Female	Date of Procedure:	0f0948d2af
Image Quality:	Blur Score: 261	Status:	Validated

Clinical Summary

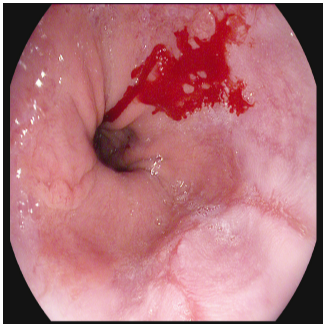

Endoscopy shows salmon-colored mucosa extending proximally from the gastroesophageal junction, covering 1.48% of the field, indicative of Barrett's Esophagus.

Endoscopic Findings

Salmon-colored columnar mucosal projections observed above the Z-line. No nodules or visible ulcerations.

Condition Identified	Severity Classification	Inference Confidence
Barrett's Esophagus	Mild	85.0%

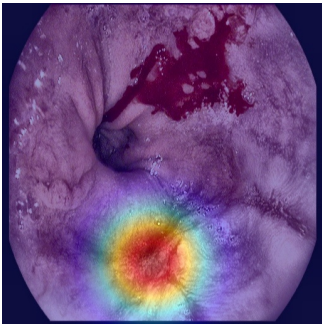

Comparative Multi-Stage Image Overlays

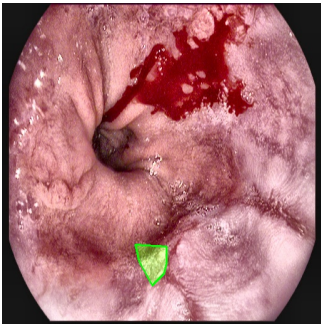

1. Original Frame

2. Enhanced (CLAHE)

3. Grad-CAM

4. Segmentation

Management Plan

- Long-term PPI therapy for reflux control (Omeprazole 20mg daily)
- Discuss endoscopic ablation therapy (RFA) if pathology confirms high-grade dysplasia

Recommended Investigations

- Four-quadrant biopsies every 2 cm (Seattle protocol) to screen for dysplasia
- Regular surveillance endoscopy at designated 3-year intervals

Cited Guidelines & Evidence
