

Structured Clinical Endoscopy Report

Patient Name:	Sarah Jenkins	Patient ID:	PT-3841
Age / Gender:	45 / Female	Date of Procedure:	4b1e463e15
Image Quality:	Blur Score: 117	Status:	Validated

Clinical Summary

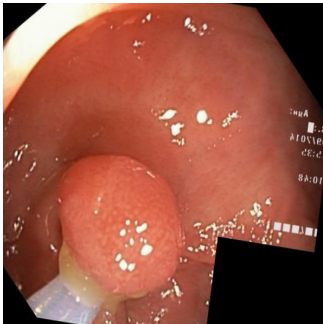

Visualization of the colonic mucosa in patient Sarah Jenkins revealed a mucosal protrusion covering 2.29% of the field, consistent with a Colon Polyp.

Endoscopic Findings

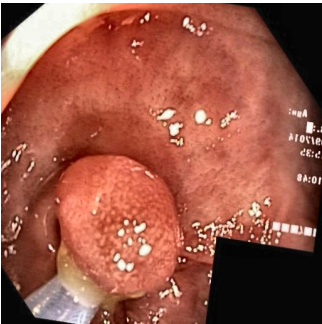

Lobulated mucosal protrusion observed. Polypectomy was successfully executed. Clean resection margins.

Condition Identified	Severity Classification	Inference Confidence
Colon Polyp (Resected)	Mild	85.0%

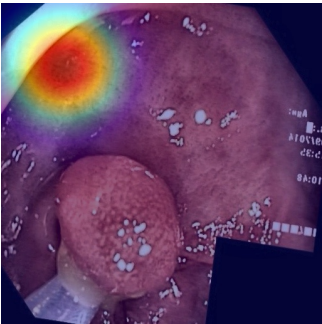

Comparative Multi-Stage Image Overlays

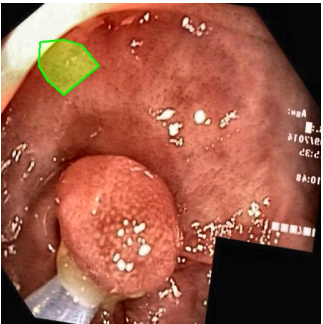

1. Original Frame

2. Enhanced (CLAHE)

3. Grad-CAM

4. Segmentation

Management Plan

- Monitor for post-polypectomy bleeding (melena, hematochezia)
- Maintain high-fiber diet and adequate hydration

Recommended Investigations

- Histopathological evaluation of the resected polyp (Adenomatous vs Hyperplastic vs Sessile Serrated)
- Repeat colonoscopy surveillance in 3-5 years pending pathology report

Cited Guidelines & Evidence

- Surveillance after polypectomy: US Multi-Society Task Force guidelines
